

Advanced MIS Approaches in Inguinal & Ventral Hernia

Course Feedback Report

Course Information

- **Course Name:** Advanced MIS Approaches in Inguinal & Ventral Hernia
- **Total Participants:** 15
- **Total Feedback Received:** 14
- **Overall Satisfaction of the Course:** 4.86 / 5

Section 1: Participant Profile

The course was attended by practicing surgeons and consultants, representing a clinically active and experienced cohort from multiple institutions and cities.

Insight:

The participant profile reflects a strong mix of professionals seeking to enhance their expertise in minimally invasive hernia surgery.

Section 2: General Course & Facility Feedback

- **Overall organisation rating:** 4.86 / 5
- **100% of participants rated the course 4 or 5**

Participants rated highly:

- Registration process
- Instrumentation and equipment
- Facility and infrastructure
- Overall learning experience

Insight:

The course was executed seamlessly, with infrastructure and logistics strongly supporting the learning experience.

Section 3: Topics & Theory

- **100% of participants confirmed that the course met or exceeded their learning objectives**
 - 71% reported objectives were fully met
 - 29% reported expectations were exceeded
- Didactic lectures and case-based discussions were perceived as:
 - Highly relevant
 - Clinically practical
 - Well-aligned with hands-on training

Key takeaway:

Theoretical content effectively complemented practical learning and enhanced understanding.

Section 4: Hands-on & Practical Exposure

- **Hands-on experience rating: 4.71 / 5**

Participants reported:

- Strong value from lab-based training
- Effective integration of theory with practice
- Improved clarity on procedural steps and techniques

Insight:

Hands-on training was a major strength and a key contributor to overall satisfaction.

Section 5: Faculty & Teaching Feedback

- **100% of participants rated faculty expertise as “Excellent”**

Faculty were highly appreciated for:

- Strong subject knowledge
- Clear explanations and structured teaching
- Effective supervision during hands-on sessions
- **High willingness to teach, guide, and support participants individually**

Overall perception:

Faculty engagement and teaching quality were standout strengths of the course.

Section 6: Confidence & Clinical Impact

- Pre-course confidence: 3.07 / 5
- Post-course confidence: 4.43 / 5

Participants reported:

- Significant improvement in surgical confidence
- Better preparedness to perform procedures independently
- Strong positive impact on professional growth

Key takeaway:

The course successfully translated learning into **real clinical confidence and readiness**.

Suggestions & Final Comments

Participants suggested:

- Continued emphasis on hands-on intensive formats
 - Introduction of more advanced or specialized modules
 - Expansion of similar courses in additional surgical domains
-

Overall Conclusion

The **Advanced MIS Approaches in Inguinal & Ventral Hernia Course** achieved an excellent overall satisfaction score of **4.86 / 5**, with unanimous positive feedback. The course delivered high-quality academic content, impactful hands-on training, and exceptional faculty engagement. Participants reported improved confidence, enhanced clinical understanding, and readiness to apply techniques in practice.

Participant Insights (Advanced Analysis)

Course Highlights (Participant Perspective)

- High-quality hands-on training and live demonstrations
 - Expert faculty with strong teaching approach
 - Clinically relevant, case-based learning
 - Well-structured and smoothly executed program
-

Key Learning Outcomes

- Improved understanding of surgical anatomy and procedural workflows
 - Enhanced confidence in performing hernia repair techniques
 - Practical intraoperative tips and decision-making strategies from faculty
-

Future Course Demand

Participants expressed interest in:

- Advanced and complex hernia surgery modules
 - Robotics and next-level minimally invasive surgery training
 - More specialized, procedure-focused workshops
-

Areas for Improvement

- Further increase hands-on exposure where possible
 - Introduce more advanced-level case discussions
 - Provide extended or follow-up learning modules
-

Participant Voice

- “Excellent hands-on experience with strong faculty support.”
- “Highly practical course that improves confidence in real clinical scenarios.”
